SUMMARY

Back-End Software Developer Back-End focused Software Developer with 2.5+ years of experience building and maintaining a production SaaS application serving Shopify merchants. Strong in server-side development with JavaScript/TypeScript, Node.js, and Next.js API routes, with hands-on experience designing RESTful and GraphQL APIs, OAuth 2.0 authentication flows, and secure integrations with third- party platforms. Solid grasp of Object-Oriented Programming and software design principles. Experienced with SQL and NoSQL databases, message-queue workflows, Docker containerization, and cloud-based deployment. Comfortable collaborating with front-end and UI/UX teams in distributed, remote settings, and eager to work with AI-assisted development tools and modern workflows.

EXPERIENCE

Software Developer

Acumen Technologies Pvt Ltd

Apr 2024 - Present Chennai, India

- Develop and maintain back-end functionality for a production Shopify SaaS application that helps frame and artwork sellers configure products, pricing, shipping, and store operations
- Build and maintain RESTful and GraphQL APIs using Node.js, TypeScript, and Next.js API routes to power the storefront, product-configuration admin app, and shipping-configuration admin app
- Integrate Shopify REST and GraphQL Admin APIs for order creation and management, inventory control, inventory locations, API scopes, and permissions
- Implement OAuth 2.0 based app installation flows, including authorization, access-token handling, scope management, billing, and shop-level configuration
- Design and maintain product-pricing logic using Object-Oriented design - configurable frame types, canvas printing, and artwork options modeled as reusable classes and JSON data structures
- Develop shipping-pricing workflows that apply seller-configured shipping rules to calculate rates at checkout
- Apply secure coding practices: input validation and sanitization, parameterized database queries to prevent SQL injection, rate limiting on public endpoints, secure HTTP headers, and secrets managed through environment variables
- Maintain relational and non-relational databases, including schema maintenance, indexing for query performance, and reusable JSON models shared across features
- Work with backend integrations and message-driven processing patterns using RabbitMQ-style queues for asynchronous jobs
- Contribute to application packaging and cloud deployment workflows using Docker, with working knowledge of Kubernetes fundamentals and AWS services (EC2, S3, RDS, IAM, CloudWatch)
- Write unit and integration tests with Jest and Postman to validate API behavior and regressions
- Collaborate with front-end developers and UI/UX designers to define API contracts and deliver features in a distributed team setting
- Use AI-assisted development tools (GitHub Copilot / Cursor) to accelerate development, documentation, and code review

EDUCATION

B.E. Mechanical Engineering

KGiSL Institute of Technology

Aug 2011 - May 2015 Coimbatore, India

SKILLS

Back-End Development

Node.js, Next.js (API routes & server-side logic), JavaScript, TypeScript, Express.js

Programming Principles

Object-Oriented Programming (OOP), SOLID principles, design patterns, clean code, DRY/reusable modules

APIs & Integrations

RESTful APIs, GraphQL, Shopify REST Admin API, Shopify GraphQL Admin API, webhooks

Authentication & Security

OAuth 2.0, access-token handling, API scopes and permissions, OWASP basics (input validation, parameterized queries, rate limiting, secure headers), secret management via environment variables, HTTPS/TLS

Front-End Collaboration

React, Next.js pages and components, headless CMS concepts (Sanity), translating UI/UX designs into API contracts

Databases & Data Modelling

Relational databases (SQL), NoSQL databases, JSON data structures, schema design and maintenance, reusable data models

Cloud & Infrastructure

AWS (EC2, S3, RDS, Lambda, IAM, CloudWatch), Docker, Kubernetes fundamentals, CI/CD basics

Messaging & Async Processing

Message-queue concepts, RabbitMQ exposure, background job processing
